

CASE STUDY

WEST VIRGINIA

State Park Location

A combination of Safety and Security methods to safeguard a unique WV State Park.

A beautiful and unique West Virginia State Park located near Charleston, WV, serves as a final resting place for United States Military Veterans who served their country.

The Situation:

A series of events involving threats from armed individuals prompted the park administrator and cabinet secretary to take immediate action. Despite contacting various state law enforcement agencies; the situation remained unresolved, and the threats persisted.

The Solution:

After speaking with the cabinet secretary, and meeting with park administrators, TSE designed and implemented a specialized security plan; with a focus on crime and terror prevention, and addressing the major challenges present based on the specific location and layout of the park.

Highlights from this specific solution include:

- High visibility patrol of park property via foot and ATV,
- Inspection of key areas for dangerous and destructive devices,
- Extra officers assigned for key dates and events,
- Management of persons, vehicles, and wildlife within the park,
- Respond to all emergency and routine calls for service within the park,
- and, other proprietary methods and solutions.

The Result:

Following implementation, persons involved in the initial incidents and threats escalated their actions, resulting in arrest and prosecution. TSE officers addressed a variety of other unrelated issues, incidents, and concerns; and performed a wide array of public safety, policing, emergency medical, and emergency management functions within the park.
